Quick Start Guide: How to Use Your Luxury Prompt Package

Welcome! This guide will show you step-by-step how to turn these prompts into stunning, studio-quality product photos in just seconds. No photography experience required.

Step 1: Understand the Prompt Formula

Every prompt in this package uses simple **bracketed variables** `[ ]`. These brackets tell you exactly where to insert your own ideas or products.

Basic Structure:

```
A luxury [YOUR PRODUCT], arranged on a [PEDESTAL], surrounded by [ACCENT ELEMENTS], [LIGHTING  
SETUP], [COLOR PALETTE], [CAMERA & LENS] --ar 4:5 --v 6.0 --style raw
```

Step 2: Replace the Brackets (Customization)

Pick any prompt from the guide and swap the brackets with your specific product and preferred style.

How You Edit It:

- Replace `[your product and material]` → (for example)→ **matte black glass serum bottle**
 - Replace `[pedestal or base material]` → (for example)→**raw travertine stone block**
 - Replace `[accent elements or props]` → (for example)→ **fresh green botanical leaves and water drops**
 - Replace `[lighting setup]` → (for example) →**soft volumetric side lighting**
 - Replace `[color palette]` → (for example) →**earthy green and warm cream tones**
-

Step 3: Generate Your Image

1. **Copy** your edited final prompt.
 2. **Open your AI Tool** (Midjourney, Leonardo AI, or DALL-E 3).
 3. **For Midjourney:** Type `/imagine`, paste your prompt, and press **Enter**.
 4. **For Leonardo AI / DALL-E 3:** Paste the prompt directly into the text box and click **Generate**.
-

Quick Reference Parameter Cheat Sheet

You can change the numbers at the end of the prompts to adjust your image format:

- **Aspect Ratio** (`--ar`):
 - `--ar 4:5` → Best for Instagram posts and e-commerce product pages.
 - `--ar 1:1` → Square format (great for thumbnails and shop grids).
 - `--ar 16:9` → Wide banner format for websites and headers.
 - **Style Parameter** (`--style raw`): Keeps the image hyper-realistic and prevents “cartoonish” or AI-looking effects.
-

Pro Tips for Best Results

- **Be Specific with Materials:** Instead of writing “a bottle,” write “a frosted amber glass bottle with a brass pump.”
- **Keep the Technical Settings Intact:** Leave camera details like `Sony A1, 90mm lens, f/4.0` inside the prompt—they instruct the AI to render real camera depth of field.
