

Edition

d: live gRPC dev-wallet watch, local mint parsing,
d with native Arabic RTL.

DEVELOPER SOURCE CODE · 82 TESTS · 5.8MS PATH

DASH Gold Edition

The completely new Dev-First (dev-wallet tracking) strategy at millisecond speed: live gRPC dev-wallet monitoring, local SPL/Token-2022 mint parsing, a 5.8 ms measured buy path, staged sell targets, and a 34-language control dashboard with native Arabic RTL.

EDITION v2.7 · ULTRA-LOW LATENCY · PERSONAL + COMMERCIAL LICENSE

DEVELOPER SOURCE CODE · EDITION V2.7

DASH — Gold Edition

The completely new Dev-First Strategy at millisecond speed: watch developer wallets over live gRPC, parse their new mint locally (SPL + Token-2022), and execute through a 5.8 ms measured path with staged exits and hard risk locks.

Strategy: Dev-First (Dev-Wallet Tracking) — new

Tests: 82/82 passing · **Dashboard:** 34 languages, Arabic RTL

DASH — Gold Edition v2.7 is an ultra-low-latency Solana sniper built by developers, for developers. It watches developer wallets over a live gRPC stream, detects the instant they create a new mint — locally, with no external API in the hot path — and can fire a buy in single-digit milliseconds. You get the full source code, a **34-language control dashboard with native Arabic RTL**, 82/82 passing tests, and a production checklist that stays locked until *you* decide to go live.
