Findings

- robots.txt still names 'anthropic-ai', a deprecated Anthropic token. Current crawlers are ClaudeBot (training), Claude-SearchBot and Claude-User.
- 25.5% of ClaudeBot requests ended in 4xx/5xx errors. Broken links or stale sitemap entries are wasting its crawl.
- ClaudeBot is a training crawler and your robots.txt does not block it. Add a group for it if you want to opt out.
- GPTBot made 20 request(s) to URLs your robots.txt disallows. robots.txt is voluntary: enforce it at the server or CDN (return 403) if it matters.

- 25 request(s) claiming to be GPTBot came from outside the IP ranges you supplied and are probably spoofed.
- GPTBot is a training crawler and your robots.txt does not block it. Add a group for it if you want to opt out.
- Bytespider made 260 request(s) to URLs your robots.txt disallows. robots.txt is voluntary: enforce it at the server or CDN (return 403) if it matters.
- Meta-ExternalAgent is a training crawler and your robots.txt does not block it. Add a group for it if you want to opt out.
