Before You Start

Important Setup Recommendation

USE A DESKTOP OR LAPTOP

For the smoothest and safest experience, use a desktop or laptop while going through this guide.

KEEP YOUR PHONE AVAILABLE

You will need your phone available to scan QR codes and approve transactions. Keep this guide open on the larger screen while you complete wallet actions on your phone.

AVOID A PHONE-ONLY SETUP

Trying to do this on just your phone will make the process much more difficult and increase your chances of making a mistake.

**BEST RESULTS COME WHEN YOU USE
BOTH DEVICES TOGETHER.**

Get Positioned in Under 30 Minutes

The financial system is shifting. Most people will get caught unprepared.

The UnbankedU Wallet Blueprint makes it easy, fast, and positions you with confidence for what's coming.

HERE'S EXACTLY WHAT YOU GET:

SPEED:

Set up your first crypto wallet in under 30 minutes

EASE:

Simple beginner-friendly steps with zero confusion

CONFIDENCE:

Exact instructions so you know precisely what to do

MONEY:

Protect and grow your wealth outside the banks

ACCOUNTABILITY:

Step into the full UnbankedU community + 30-day onboarding

TIMING:

This is the right moment to get positioned

YOU'LL LEARN HOW TO:

- Choose the right wallets (Exodus hot + Tangem cold)
- Set it up securely
- Protect your seed phrase the right way - this is your vault
- Fund safely and make your first transaction confidently

PERSONAL RECOMMENDATIONS INCLUDED

Includes my personal recommendations: Exodus, Tangem, and Shieldfolio (your keys to the vault). All links inside.

Note: Tangem & Shieldfolio are physical products and may take a few days to arrive - start using Exodus immediately.

No fluff. This is the exact roadmap I wish I had when I started.

Choose Your Setup

The Three-Part Wallet System

EXODUS

Recommended hot wallet for everyday learning, receiving, swapping, and small transactions. Keep only the amount you are willing to actively use.

TANGEM

Recommended cold hardware wallet for long-term storage. It keeps your private keys offline and separate from your phone or computer, so your crypto stays safe.

SHIELDFOLIO

Recommended seed phrase storage for durable, offline backup. Use it to protect recovery words from loss, damage, and casual exposure.

Simple rule of thumb: Exodus is your training and spending wallet. Tangem is your vault. Shieldfolio is your recovery safety net.

- 1 Use Official Sources Only.** Install or initialize the wallet from the official website, app store, or verified manufacturer instructions.
- 2 BACK UP BEFORE FUNDING.** Write down recovery information offline before adding money.
- 3 TEST BEFORE TRUSTING.** Send a small transaction before moving meaningful funds.
- 4 Separate Your Wallets.** Keep learning, storage, and high-risk activity in different wallets.

Before You Begin

Clean Setup Checklist

A secure wallet begins before you press create. **Prepare the environment first**, especially if you are recovering from a compromised device, phishing link, or fake support interaction.

- ☐ **Private room:** Give yourself enough time to finish without rushing.
- ☐ **Updated device:** Update your phone or computer before installing wallet apps.
- ☐ **Official link:** Use the official app store or the official website typed manually.
- ☐ **Secure email:** Create a new email password if your email may be compromised.
- ☐ **Device lock:** Turn on device lock, biometric unlock, and automatic screen lock.
- ☐ **Offline writing:** Have pen and paper ready. **No screenshots, cloud notes, or text messages.**
- ☐ **Seed storage:** Prepare your Shieldfolio or other offline seed phrase storage.
- ☐ **Backup location:** Decide where the backup will live before you create the wallet.

RESET WARNING

If you were scammed, assume old wallet addresses, browser extensions, saved passwords, cloud backups, and devices may be unsafe until reviewed. Starting over means creating a new wallet and moving forward with new habits.

Hot Wallet

Exodus Setup Workflow

Use Exodus as the beginner-friendly hot wallet for small balances and practice transactions. The current Exodus support flow is: install from the official source, create or open the wallet, **back it up**, receive a small test amount, then practice a small send.

SCREENSHOT 1: OFFICIAL INSTALL

Use the official install path. Desktop users should start from exodus.com/download; mobile users should use the official App Store or Google Play listing.

SCREENSHOT 2: BACKUP ENTRY

Show where backup starts. Desktop: Settings > Backup. Mobile: Wallet > profile > Settings > Backups.

SCREENSHOT 3: SECRET KEY SAFETY

NEVER show real recovery words. Exodus notes screenshots and recordings are blocked while the secret key is visible on Mobile and Desktop.

SCREENSHOT 4: RECEIVE ADDRESS

MATCH the asset and network. Copy the address and compare the first and last characters before funding.

SCREENSHOT 5: SEND PREVIEW

Send a tiny test first. Show the transaction review screen and emphasize that blockchain transactions are usually irreversible.

USE ONLY SMALL BALANCES

Exodus is for learning and everyday movement. Keep long-term holdings in cold storage and back up recovery information offline.

EXODUS SELF-CUSTODY WALLET

DOWNLOAD EXODUS

Cold Storage

Set Up Tangem As Your Vault

Tangem is recommended for cold hardware storage because it keeps your **long-term wallet separate** from everyday browsing, messages, and app activity. Follow the in-app instructions carefully and take your time.

- 1 **Buy from a trusted source.** Avoid opened, used, discounted, or mystery third-party listings.
- 2 **Inspect before setup.** Install the Tangem app from the official app store and inspect the packaging before starting.
- 3 **Protect backup cards.** Initialize the cards inside the official Tangem app and keep backup cards in separate secure locations.
- 4 **Record seed phrases offline.** If you choose a seed phrase option, store it with Shieldfolio. If your setup is card-only, protect the backup cards like cash.
- 5 **Test the vault.** Set access controls, then test the wallet with a small receive transaction.
- 6 **Move funds gradually.** Send a small test first, verify receipt, then send the larger amount.

WHILE TANGEM IS EN ROUTE

Tangem must be ordered and delivery may take time. Until it arrives, use Exodus for learning and only small temporary balances. Do not delay your backup: write your Exodus seed phrase offline immediately and lock it in a safe.

Backup

Protect Your Seed Phrase For Life

Your seed phrase is the **master key**. Anyone who gets it can take the wallet. If you lose it, you may lose access forever. Your goal is simple: offline, durable, private, and findable by you.

- **WRITE EVERY WORD** clearly and in order. Number each word before storing it.
- **NEVER store the phrase digitally.** No photos, email, cloud drives, password managers, notes apps, or chat messages.
- **Use durable storage.** Shieldfolio is recommended instead of loose paper alone.
- **Protect the location.** Store backups away from theft, fire, water, and casual discovery.
- **NEVER share the phrase.** Do not tell friends, support agents, social media helpers, or investment contacts.
- **Practice carefully.** Run a recovery check only when you understand the process and are using the official wallet app.

THE BACKUP TEST

Before adding real funds, ask yourself: if my phone disappeared today, could I restore access without calling anyone, searching old messages, or guessing a password? If the answer is no, the wallet is not ready.

Critical Protection

This Is Your Vault

This page is different from everything else in this guide. Your seed phrases are not ordinary passwords. They are the **actual recovery keys** to your entire crypto holdings.

Shieldfolio is where those keys are stored and protected offline. If your phone breaks, your wallet app disappears, or your device is replaced, these words can restore access. If this backup is your only recovery path and it is lost or destroyed, access to your assets may be gone permanently.

THE HIGHEST-PRIORITY RULE

DO NOT photograph it. DO NOT upload it. DO NOT email it. DO NOT share it. Record every word accurately, confirm the order, and protect the Shieldfolio location from theft, fire, water, and casual discovery.

YOUR FINAL LINE OF DEFENSE

Treat this backup with the seriousness of the assets it controls. Store it privately. Keep its location known only to the people who truly need to know. Review your recovery plan before adding meaningful funds.

While Shieldfolio is en route: Use a small dedicated black notebook as a temporary offline backup. Clearly write the seed phrase in order and record essential account passwords in a **separate section or separate notebook**. Lock it in a safe, never carry it with you, never photograph it, and transfer the information into Shieldfolio as soon as the product arrives.

SHIELDFOLIO STONEBOOK**PROTECT WITH SHIELDFOLIO**

Fund Your Wallet

Fund Safely

The simplest way to begin is to buy a **small amount directly inside Exodus**. You do not need to move money from another wallet or rush through the process.

PAYMENT METHODS YOU MAY SEE

VISA

MASTERCARD

APPLE PAY

GOOGLE PAY

BANK ACCOUNT

- 1 **Open Exodus and select Buy.** Use the Buy option inside the official Exodus wallet.
- 2 **Choose the crypto.** Select the asset you want and enter a small beginner amount.
- 3 **Choose a payment method.** Exodus may show Visa, Mastercard, Apple Pay, Google Pay, or a bank account, depending on your region, device, and purchase provider.
- 4 **Review the quote.** Check the crypto, purchase amount, provider fee, and the amount you expect to receive.
- 5 **Complete the provider check.** The payment provider may request identity, card, or bank verification. **It will never need your seed phrase.**
- 6 **Wait for the purchase to arrive.** A pending purchase can take time. Check the transaction status before trying again.

KEEP THE FIRST PURCHASE SMALL

Payment methods, providers, limits, fees, and availability can vary by location. Start with an amount you are comfortable learning with, review every screen, and never share your recovery phrase.

First Transaction

Make Your First Safe Send

Your first send should be small, slow, and easy to verify. A **test transaction** lets you confirm the address and network before you move a larger amount.

- 1 Prepare the receiving wallet.** Open the exact asset you want to receive and confirm which network it supports.
- 2 Copy and paste the address.** Do not type it manually. Compare the first and last characters after pasting.
- 3 Match the asset and network.** Bitcoin must go to a Bitcoin address. USDC, ETH, and other assets must use the correct supported network.
- 4 Send a small test amount first.** Use only enough to confirm that the transaction reaches the correct wallet.
- 5 Review before tapping Send.** Check the asset, network, address, amount, and fee one final time.
- 6 Wait for the test to arrive.** Only send the remaining amount after the receiving wallet shows the test transaction.

CRYPTO TRANSACTIONS ARE IRREVERSIBLE

Once a confirmed transaction is sent, it usually cannot be canceled or reversed. A wrong address, wrong asset, or wrong network can permanently lose the funds.

Slow down. Compare the first and last address characters. Confirm the network. Then send the test.

Scam Defense

Rules That Protect Your Wallet

Most wallet losses come from social pressure, fake websites, exposed seed phrases, malicious approvals, or rushed decisions. Use these rules until they feel **automatic**.

- **No seed phrase sharing.** Real support will never need it.
- **No urgent transactions.** Urgency is a weapon. Slow down.
- **No blind links.** Type official websites yourself or use saved bookmarks you created.
- **No wallet syncing.** Websites asking you to validate, verify, unlock, or resync with a seed phrase are scams.
- **No mystery tokens.** Do not interact with random airdrops or tokens you did not request.
- **No unlimited approvals.** Review permissions before connecting wallets to apps.
- **No public troubleshooting.** Scammers monitor comments and direct messages for people who need help.

Start Over

Recovery And Rebuild Checklist

If you lost access or believe your wallet was compromised, **do not keep using the same setup**. Treat the rebuild like a clean financial account opening.

- 1 STOP USING THE SUSPECTED WALLET.** Do not enter the seed phrase into any rescue website.
- 2 Secure your accounts first.** Update email, phone, device lock, and exchange account passwords.
- 3 Create a new wallet.** Use a clean device or freshly reviewed device.
- 4 BACK UP BEFORE ADDING FUNDS.** Write and store the new seed phrase offline with Shieldfolio.
- 5 Move funds carefully.** Transfer remaining funds only if you still control them and understand the risk.
- 6 Keep an inventory.** Record wallet name, purpose, backup location clue, and date created. Do not write the seed phrase in the inventory.

FRESH START PRINCIPLE

A compromised seed phrase cannot be made safe again by changing a password. The fix is a new wallet, a new backup, and cleaner habits.

You Are Set Up. Now Get Guided.

Wallet setup is the first step. The full UnbankedU community and 30-day onboarding program help you keep going with structure, support, safety habits, and beginner-friendly next steps.

- ☐ 30-day guided onboarding program
- ☐ Beginner wallet support and safety checklists
- ☐ Community accountability as you learn
- ☐ Step-by-step crypto confidence without hype

Founder Letter

A Personal Note From The Founder

First, I want to say this sincerely: **congratulations**. If you made it to this page and completed your wallet setup, you did something important for yourself and your future.

You now have a cleaner foundation. Your wallet is set up with intention, your recovery information has a protection plan, and your keys are no longer something you are leaving to memory, screenshots, or chance.

That matters. Securing your keys means you are protecting access to your assets.

I know this space can feel overwhelming. There are new words, new warnings, new apps, and a lot of noise. So I want to thank you for breaking through that pressure and taking action anyway. You did not just read about security. You moved differently.

My goal with UnbankedU is to make sure you are not learning alone, guessing alone, or trying to recover from avoidable mistakes without support. You deserve clear steps, calm guidance, and a community that meets you where you are.

When you are ready, I would love to welcome you into the full **UnbankedU community and 30-day onboarding program**. We will help you keep building with structure, accountability, beginner-friendly next steps, and the confidence to keep going safely.

You took action. You secured your foundation. Now let us help you keep moving forward.

Heres to the **FUTURE**

Kenneth Francis

Founder of UnbankedU
