9. Connect Theme Features to Shopify Admin
10. Multi-Language (EN / AR / FR / ES)
11. Troubleshooting
12. License & Final Notes

1. Welcome & What You Get

NovaCart is a modern Shopify Online Store 2.0 theme built with pure Liquid and Vanilla JavaScript — no heavy external libraries. This visual guide uses real screenshots from the live theme and Theme Customizer so you can configure everything without writing code.

- NovaCart_Shopify_Theme_Upload_v1.6.7.zip — upload this file in Shopify Admin
- NovaCart_User_Guide_v1.6.7.pdf — this documentation
- License / README (included in marketplace package)

2. Upload & Install on Shopify

Step 1. Sign in to Shopify Admin.

Step 2. Go to Online Store → Themes.

Step 3. Click Add theme → Upload zip file.

Step 4. Select NovaCart_Shopify_Theme_Upload_v1.6.7.zip.

Step 5. Click Customize to configure, or Publish when ready.

Step 6. Preview desktop + mobile before launch.

Tip: Keep your previous theme installed as a backup. You can switch back anytime from Online Store → Themes.

3. Storefront Tour — Real Screenshots

Below is the live customer-facing storefront. The left sidebar menu (Home, Products, Collections, Cart, My Account, Search, Contact) is always available. The top bar includes color scheme, currency switcher (USD default), search, wishlist, compare, account, and cart.

Homepage — Shop by category

Sidebar navigation · Announcement bar · Color + Currency switchers · Category cards (Food, Clothes, Technologies, Home, Gaming)

Products page

The Products view supports grid/list toggle, product count, and full sort options (Featured, Best selling, A-Z, Price, Date). Empty state appears when no products match filters or the catalog is still empty.

Products page with sort dropdown (Alphabetically A-Z selected) and empty-state message

Collections page

The Collections list shows your published collections. Create collections in Shopify Admin → Products → Collections and assign products to them.

Collections list page — collection cards with cover images

Cart page

Empty cart state with “Browse products” call-to-action

Search products

Dedicated search page with search field and Search button

Contact form

Contact is available from the sidebar and as a homepage section (anchor #contact). Fields: Name, Email, Phone, Message.

Contact us form — replies typically within 24 hours

Customer accounts — Sign in

Shopify customer account sign-in (Continue with shop / Email). Enable accounts under Settings → Customer accounts.

4. Theme Editor Walkthrough

Open Online Store → Themes → Customize. The left panel is organized into:

Area	What you control
Header group	Customize section + Header (logo, announcement, currencies, colors)
Template	Page sections: Marquee, Categories, Promo countdown, Featured collection, Shoppable reels, Contact form...
Top dropdown	Switch between Home, Products, Collections, Cart, Search, Pages...
Theme settings (gear)	Global options when available — if empty, use Header group → Customize

Important: If Theme settings (gear icon) looks empty, open Header group → Customize. That is the main control center for Colors, Currency rates, Logo, Free shipping, Marketing popup, and product/collection feature toggles.

5. Customize Section — Global Settings

Path: Customize → Header group → Customize. From the Theme Editor video walkthrough, this panel includes:

- Currency rates — Shop currency → USD / EUR / GBP / MAD rates (display conversion)
- Logo & favicon — upload brand assets
- Free shipping — threshold in cents (example: 5000 = \$50.00)
- Marketing popup — enable, image, heading, discount code, delay
- Product page features — size chart, frequently bought together, shipping calculator
- Collection page features — banner, filters, columns, quick add, quick view

6. Header · Colors · Currency Blocks

Inside Header you can:

- Set Theme colors / Color scheme (Classic, Dark, Emerald, Rose, Royal) — also visible to visitors via the color switcher next to currency
- Toggle and edit the announcement bar
- Add Currency blocks — each block has: Currency code, Symbol, Flag emoji, Conversion rate, “Use as default”
- Upload logo and configure header layout

Currency tip: To add more currencies, open Header → Add Currency block. Set conversion rate relative to your Shopify store currency. The storefront switcher defaults to USD when configured as shown in the screenshots.

Theme Editor — Header / Currency configuration

Left panel shows Currency blocks and Customize under Header group

7. Homepage Sections

Default homepage template order (reorder anytime in the editor):

1. Marquee — scrolling trust messages (Add Item for each line: icon emoji + text)
2. Categories — visual category cards (Food, Clothes, Technologies, Home, Gaming). Link each card to a collection or URL
3. Promo countdown — limited-time offer title, description, code, CTA
4. Featured collection — product grid; select a collection in settings; category tabs use Product type
5. Shoppable reels — short product video highlights
6. Contact form — homepage contact block

Products empty on Featured collection? Add products in Admin → Products, set them Active, assign Product type, and select a real collection in the Featured collection section settings (or use All products as fallback).

Homepage categories in action

Five category cards with icons and Shop now links — fully editable via Categories section blocks

8. Products, Collections, Cart, Search, Contact

Page	How it works in NovaCart
Products	Collection-style listing with sort + grid/list. Needs products in the store catalog.
Collections	Lists published collections. Create them under Products → Collections.
Cart	Cart page + cart drawer. Empty state includes Browse products button.
Search	Dedicated search page + header search icon. Uses Shopify search.
Contact	Sidebar link goes to homepage #contact form. Optional: create page handle “contact”.
My Account	Shopify customer accounts (Settings → Customer accounts).

9. Connect Theme Features to Shopify Admin

Theme feature	Configure in Shopify Admin
Products & prices	Products → add products, variants, media, pricing
Category tabs / filters	Set Product type on each product; create Collections
Navigation	Online Store → Navigation (Main menu)
Languages	Settings → Languages → Add & Publish (EN, AR, FR, ES)
Checkout currency	Settings → Markets / Payments
Shipping rates	Settings → Shipping and delivery
Payments / COD	Settings → Payments
Customer accounts	Settings → Customer accounts
Contact notifications	Settings → Notifications

10. Multi-Language Setup (EN / AR / FR / ES)

NovaCart includes complete locale files (200+ strings) for English, Arabic (RTL), French, and Spanish. Visitors only see languages you publish.

- Step 1. Settings → Languages → Add language.
- Step 2. Choose Arabic, French, or Spanish.
- Step 3. Publish each language.
- Step 4. Enable for Markets if you use Markets.
- Step 5. Test the language control on the storefront.

Important: Theme locale files alone are not enough. Shopify activates a language only after it is published in Admin.

11. Troubleshooting

Only English in language menu

Publish languages under Settings → Languages.

Homepage / Products show 0 products

Add active products; assign collection in Featured collection; hard-refresh (Ctrl+F5).

Contact → Page not found

Use homepage Contact form (#contact) or create a page with handle contact.

Theme settings gear is empty

Use Header group → Customize and section settings on Product / Collection templates.

Currency switcher does not change checkout total

Display conversion is visual only. Checkout follows Markets & Payments.

Collection filters missing

Enable filters in Search & Discovery; products need types/tags/options.

Color scheme barely changes UI

Use the visitor color switcher (next to currency) and Header → Theme colors. Schemes map to CSS variables across the theme.

12. License & Final Notes

Use NovaCart according to the license included with your purchase (typically one live storefront unless your license states otherwise). Keep a backup of the original zip. For best results use an updated Shopify plan and a modern browser.

Thank you for choosing NovaCart.

Version 1.6.7 · Built for Shopify Online Store 2.0 · Liquid + Vanilla JS
Documentation includes real storefront and Theme Editor screenshots.
