Closeframe — Local Punch & Handover Studio

Make the last details of a project easier to track, review and hand over. Closeframe keeps punch items, linked evidence and a project document index together on one local computer for one operator.

ACTUAL APP SCREEN · FICTIONAL SAMPLE RECORDS

Board view: local project selector, status lanes, search and filters, document register and recent local activity.

A practical closeout workspace

Create multiple project/site records for the licensed business. Add and edit items with trade, assignee text, priority, due date and location. Search and filter the board; record completion and review notes as items move open → ready for review → closed. Reopen with a reason when follow-up is needed.

Included with v1.0.0

Editable Python source and styles; 19 Python regression tests; setup, operations and API guides; license; sample import CSV; fictional handover ZIP and printable PDF; four-page A4 buyer guide; and a read-only free tour. The tour and example files contain fictional records, not site evidence.

Start safely

Requires Python 3.10+; standard library and SQLite, no external Python packages, account, network service or installer. Install Python yourself if needed. Run python3 app.py, then open the local address on the same computer. Normal first run is empty. For fictional working data, use --demo-data with a new, separate, empty data folder; the option refuses a non-empty folder.

From observation to review

Use notes to record what the operator entered. A status or note is not an independent inspection or another party’s acceptance.

1 Record the item

Use a specific title and add location, trade, priority, due date and assignee text where useful.

2 Attach evidence, if appropriate

PNG, JPEG and PDF are accepted with extension/signature checks. Limits: 5 MB per file and 50 MB total. Files are not malware-scanned.

3 Mark ready for review

Enter a meaningful completion note. If that project requires evidence, an attachment must already be linked.

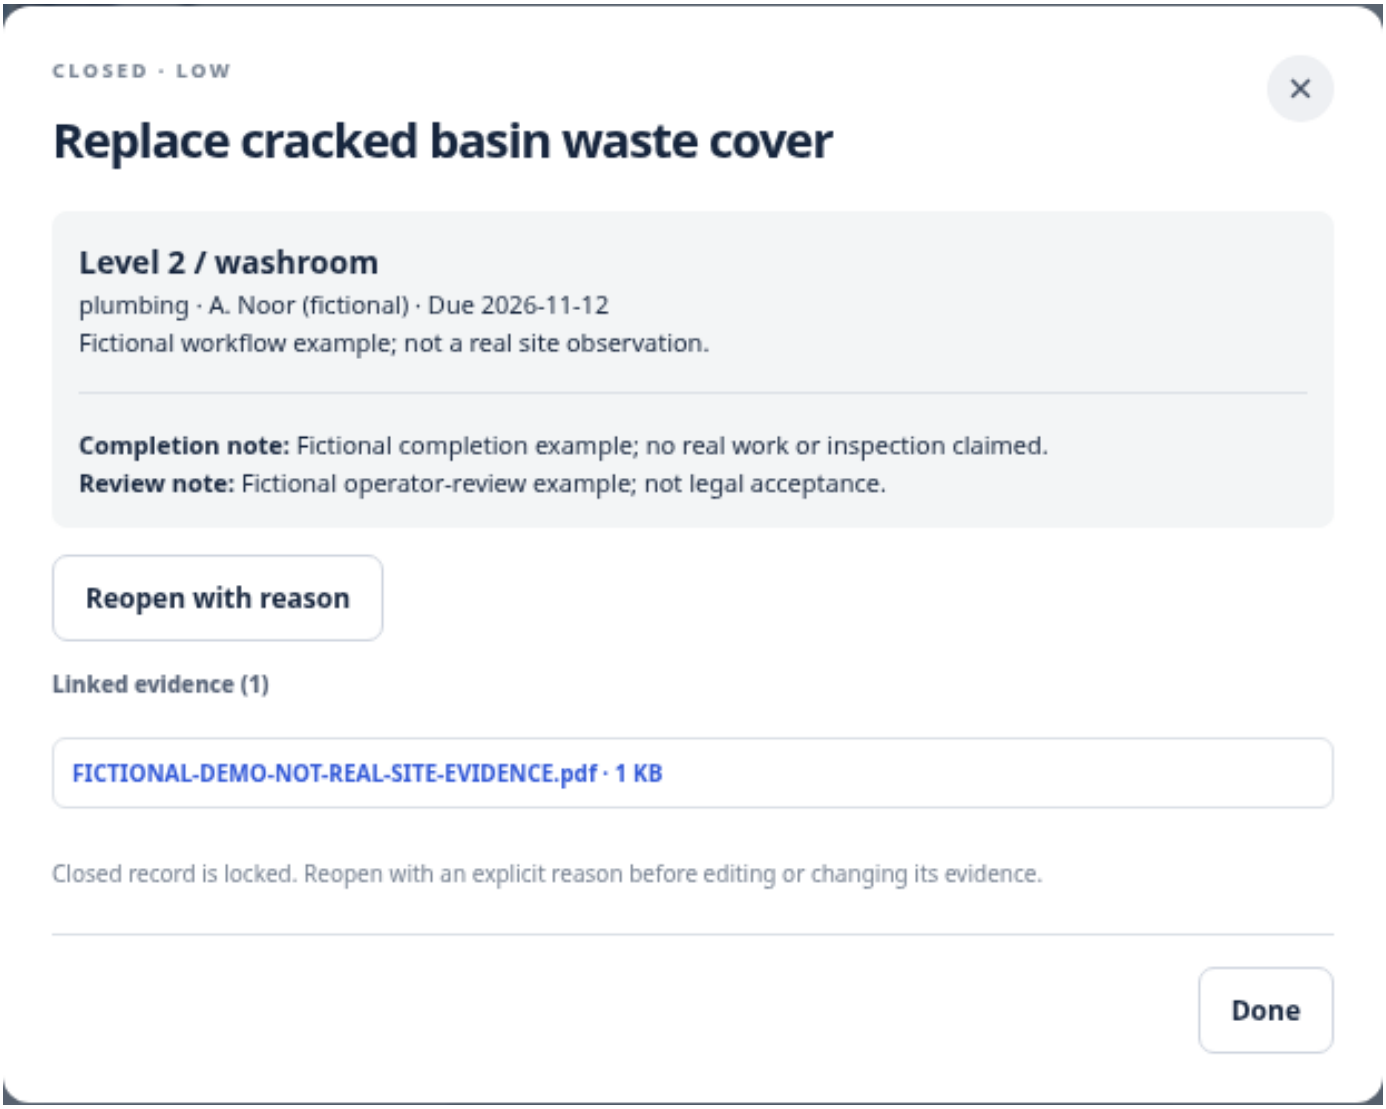

4 Close after review

Enter a review note. A closed item and its evidence are locked against editing/removal until reopened.

5 Reopen with a reason

If follow-up is needed, record a reason, then edit or change evidence and repeat the workflow.

ACTUAL APP SCREEN · FICTIONAL SAMPLE RECORDS

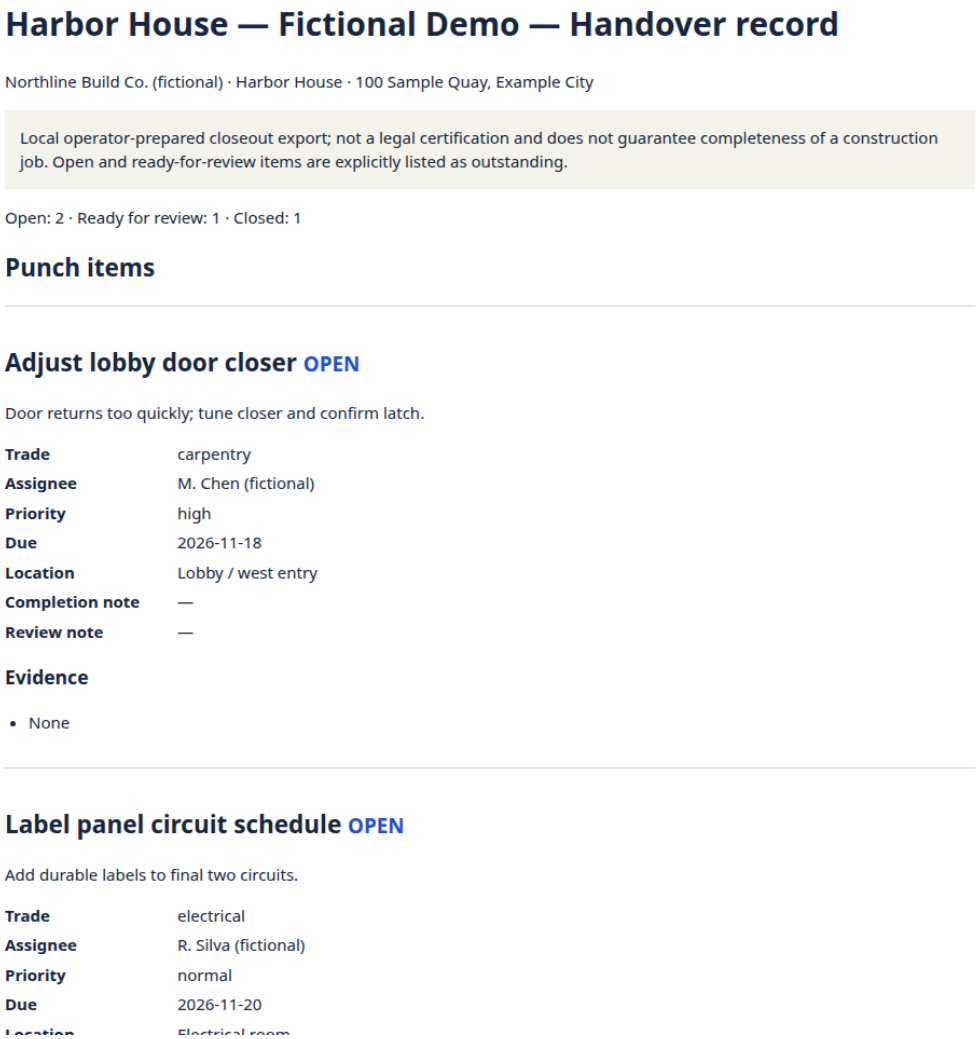

A closed fictional sample item shows completion and review notes, linked demo PDF, and the explicit reopen-before-edit rule.

Handover is not a backup

Choose the output for its purpose: a project handover is for sharing records; a full backup is for restoring a local workspace.

ACTUAL PRINTABLE HANDOVER OUTPUT · FICTIONAL SAMPLE RECORDS

Harbor House — Fictional Demo — Handover record

Northline Build Co. (fictional) · Harbor House · 100 Sample Quay, Example City

Local operator-prepared closeout export; not a legal certification and does not guarantee completeness of a construction job. Open and ready-for-review items are explicitly listed as outstanding.

Open: 2 · Ready for review: 1 · Closed: 1

Punch items

Adjust lobby door closer OPEN

Door returns too quickly; tune closer and confirm latch.

Completion note	—
Review note	—

Evidence

- None

Label panel circuit schedule OPEN

Add durable labels to final two circuits.

Trade	electrical
Assignee	R. Silva (fictional)
Priority	normal
Due	2026-11-20
Location	Electrical room

Example exported handover record. Open and ready-for-review items are shown and counted as outstanding.

Project Handover ZIP

Contains printable escaped HTML, punch and document CSVs, actual included project attachment bytes, relative attachment links and a manifest. It is a project-level export, not a restorable database snapshot. It does not certify a job or guarantee completeness.

Full backup and restore

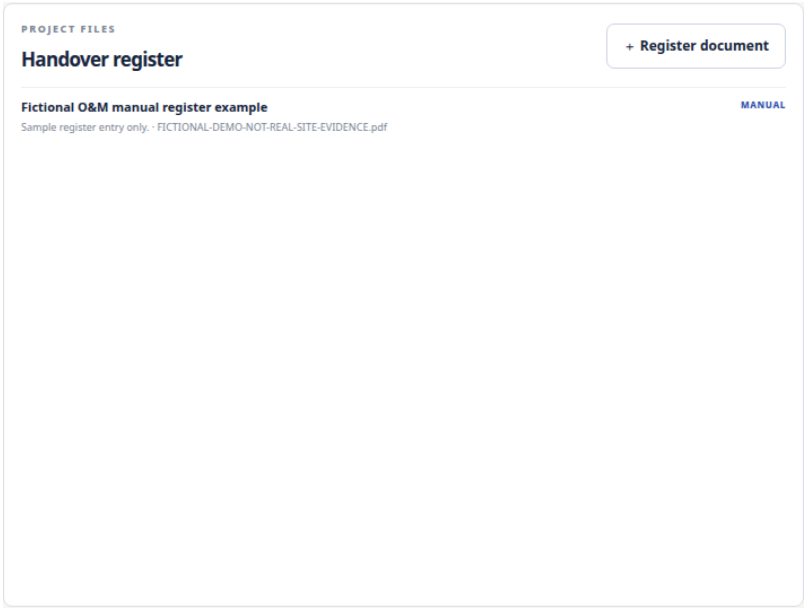

Full backup contains the SQLite database, actual evidence files and a size/SHA-256 manifest. Restore validates before replacement and makes a dated local safety copy. Restore replaces current history; it does not merge. Keep independent backups, verify recovery, and protect unencrypted files.

Other portable records: CSV import previews rows and commits only if every row is valid; exports prefix formula-like values defensively. The handover register is a manually maintained index of manuals, warranties, as-builts or other documents; it does not establish that the document set is complete.

A local tool with a defined boundary

Closeframe is supplied as Python source for local use, not as an installed desktop or mobile executable.

ACTUAL APP SCREEN · FICTIONAL SAMPLE REGISTER

The register is manually maintained; links reuse project attachments.

License at a glance

Perpetual internal commercial use for one business and one designated operator on one local computer at a time. Multiple local project/site records are allowed.

Private modification and reasonable private backups are permitted. You may share generated records, CSV exports and attachment copies when you have rights to their contents.

No source/app redistribution or resale, hosting, LAN or multiuser operation, cloud hosting/sync, or use for additional businesses/operators. Full terms are in the included LICENSE.

What was checked

Recorded release checks: 19/19 Python regression tests, including demo startup and non-empty-folder refusal; 54/54 Chromium buyer-workflow checks, including backup → change → restore; 9/9 independent backend check groups; and 9/9 raw-body serialization checks. Chromium viewport layout checks covered 1440, 768 and 390 pixels.

Tests are evidence of completed checks, not a guarantee of bug-free software. Viewport checks are not mobile-device testing or mobile field capture.

Know the limits

Tested on Ubuntu Linux with Python 3.12 and Chromium only. Other operating systems, Python versions and browsers are unverified. The app has no accounts, team access, phone/LAN/remote/cloud access or sync. Assignees are plain text, not user accounts.

No multi-party acceptance, legally binding signatures, certification or guaranteed job completeness. Local history is not tamperproof. Files are not malware-scanned; backups are unencrypted. Keep independent backups and secure files yourself.

No support, maintenance, warranty or future-update commitment. Supplied as-is under the included license.
