FOCUSFLOW

PWA STARTER · VERSION 1.1.0 · PRODUCT PRICE $14.99

A focused, local-first app shell

A small responsive web-app starter for managing tasks and a focused session. It preserves the original dark-blue rounded-card visual style and adds safer task handling, working status filters, a usable light theme, and an offline-capable app shell.

CONTROLS & INCLUDED BEHAVIOR

Tasks	Add, complete, remove, and filter All / Active / Completed. Task text is rendered as text, not interpreted markup.
Themes	Dark blue default plus a contrasting light theme; preference is browser-local when storage is available.
Offline app shell	Service worker precaches HTML, CSS, JavaScript, manifest, and icons; navigation falls back to cached app shell.
Timer	25-minute in-page countdown with start, pause, reset, completion, and restart behavior.

Important limits

Offline use requires an initial online load and active service worker on HTTPS or localhost. Installation eligibility and prompts vary by browser and operating system; no prompt is guaranteed. Tasks stay in this browser on this device; there is no backend, account, or cloud sync. The timer is not persisted and is not a dependable wall-clock/background timer. This file is a static product overview PDF—not an interactive, installable application.

Included in paid starter: source files, app icons, user guide, offline checklist, listing copy, and buyer license. A separate free demo is personal, noncommercial evaluation-only.
